

# Create an application for construction materials

Name: Alzahra Alamri

E-mail: alamrialzahra2@gmail.com

## Idea Description:

---

This application helps people to know the real price of all building materials that they need. The application also includes Omani companies producing building materials. And as we know during construction, we need some tests for some materials, or to make sure that the correct material is used for construction. Therefore, through the application, it is possible to search for some laboratories located in Oman to conduct the test. The application also contains companies that provide necessary equipment for construction.

## Challenges The Idea is Addressing:

---

First, we noticed that some citizens do not have experience or full knowledge of building prices and construction related tests and some of the best Omani companies that manufacture building materials. Many citizens have had problems with price cheating by contractors.

## Benefits of Idea Implementation :

---

- The citizen's ability to know the latest update of all construction prices.
- Supporting Omani companies that manufacture building materials.
- Compilation of the most prominent private laboratories in construction.
